What is claimed is:

1.   A method comprising:

identifying generic collaborative entities within an enterprise;

classifying a set of information associated with each collaborative entity;

creating page templates and pre-defined navigational links for each page template;

deploying said page templates as collaborative information spaces within the enterprise; and

publishing information submitted by a collaborative entity in a corresponding deployed page template.

2.   The method of claim 1, further comprising:

incorporating collaborative information spaces into search tools.

3.   The method of claim 2, further comprising:

finding an expert with at least one of said search tools.

4.   The method of claim 2, further comprising:

finding corporate information with at least one of said search tools.

5.   The method of claim 1, wherein said classifying a set of information comprises identifying a purpose of publishing a set of page documents.

6.   The method of claim 1, further comprising:

displaying hyperlink information on the page template, the hyperlink representing a link t additional information included in the set of information.

7.   The method of claim 1, wherein the collaborative entities include a person.

8.   The method of claim 1, wherein the collaborative entities include a team.

9.   The method of claim 1, wherein the collaborative entities include a department.

10.   The method of claim 1, wherein the collaborative entities include a project.

11.   The method of claim 1, wherein the collaborative entities include an initiative.

12. The method of claim 1, wherein the collaborative entities include a community.

13. The method of claim 1, further comprising:

assigning a privacy level to a collaborative information space.

14. The method of claim 13, wherein the privacy level comprises one of a public privacy level open generally to users in the enterprise and a private privacy level closed to users not associated with the collaborative entity.

15. An article comprising a machine-readable medium including machine-executable instructions operative to cause a machine to:

identify generic collaborative entities within an enterprise;

classify a set of information associated with each collaborative entity;

create page templates and pre-defined navigational links for each page template;

deploy said page templates as collaborative information spaces within the enterprise; and

publish information submitted by a collaborative

entity in a corresponding deployed page template.
